GAME OVERVIEW

Cargo Industry is a single-player transportation and industrial management strategy game. The player builds a railway and road network, decides where industry is located, staffs it, and earns revenue by moving raw materials and finished goods across a procedurally generated world.

- **The player** builds rails, roads, stations and depots, places and staffs factories, configures vehicles and routes, and reinvests delivery revenue.
- **The world** is generated fresh each game — a 256×256 tile map with cities of varying size, terrain, water and forests.
- **The hook:** factories are not pre-placed. The player chooses where each facility is built and which type it is.
- **The scope:** cargo only. No passenger transport.

IN GAME Rail network converging on Amberfield

THE CORE EXPERIENCE

You operate a growing transport and industry company in a world that has just been drawn for the first time.

EMOTIONAL CORE

The planner's satisfaction of seeing a supply chain close and start paying for itself — and ownership of a map whose industrial geography the player authored.

PACE

Deliberate and continuous rather than mission-driven. No combat, no fail states, no timer. The pressure is economic and self-imposed.

ACTIVITY MIX

Survey the map, scout buildable ground, build and terraform, place and staff industry, route the fleet, then read the results.

Why it holds attention: every new map invalidates the previous optimal layout, and every factory placement is a bet on the network you are going to build around it.

CORE GAMEPLAY LOOP

WHERE THE DECISIONS ARE

Siting — terrain, trees, rocks, water and cities all block construction, so finding viable ground is a genuine search.

Mode — rail or road, each with its own network and vehicle catalogue.

Labour — every operating factory needs an assigned worker.

THE ECONOMY

Cargo delivery revenue is the sole income source, funding track, roads, depots, vehicles, factories and wages.

Factories interconnect automatically by the resources they receive and produce. Statistical tables track network performance.

GAMEPLAY SYSTEMS

INFRASTRUCTURE

Tile-based building on an isometric grid: terrain tools, full rail piece set, 4 depot types, 2 station types.

Diagonal routing with junctions and switches.

INDUSTRY — PLAYER PLACED

16 facility types: **7 producers** (mines, oil wells, farm, forest) and **9 processors** (refinery, electronics, furniture, power station, sawmill, slaughterhouse, grain, smelter, glass).

RESOURCES

16 materials and products — from coal, ore, oil, grain and livestock to boards, metals, glass, meat, flour, furniture and electronics.

STAFF & FLEET

16 professions, three salary tiers. **A factory without a worker does not operate.**

Rail: 3 locomotives, 16 wagons. Road: 16 vehicles. One active vehicle per depot.

Automatic rerouting. A vehicle stranded by a destroyed line stops rather than failing, then reroutes and resumes once the connection is rebuilt — so reorganising a mature network mid-operation is supported, not punished.

UNIQUE SELLING POINTS 1 OF 2

01 PLAYER-AUTHORED INDUSTRY

The player chooses the location and type of every factory. Nothing is seeded automatically.

Terrain, water and cities block placement, so a good site is earned by reading the map.

Other tycoons ask you to serve an existing industrial map. This one asks you to design it.

02 STAFFING AS A CONSTRAINT

Every factory needs a worker from a 16-profession roster, at a chosen salary tier.

Expansion carries an ongoing labour cost, so growth is not only a construction problem.

A workforce layer on a genre that models only capital spend.

03 TWO FULL TRANSPORT MODES

Rail (3 locomotives, 16 wagons) and road (16 vehicles), each a full build system.

Short local hauls and long bulk corridors need different answers.

Both carry their own stations, depots and map overlays — road is not a token option.

UNIQUE SELLING POINTS 2 OF 2

04 A NETWORK YOU CAN REBUILD WHILE IT RUNS

Diagonal track and a full junction set allow flexible layouts, and a stranded vehicle resumes automatically once the line is restored.

Reorganising a mature network is the most common late-game activity in this genre, and usually the most punishing. Here that penalty is removed.

05 A NEW WORLD EVERY RUN

Procedurally generated 256×256 maps with varied cities, elevation, water and forests. Replayability comes from the map itself, not from authored scenarios: no two campaigns

share an optimal layout.

IN GAME Tile build cursor on the grid – diagonal track, junctions and depots in a live network

WORLD & SETTING

IN GAME Generated terrain

- **Scale** — 256 × 256 tiles; a continent-scale landmass with dozens of lakes and settlements.
- **Settlements** — cities of clearly different tiers, from low-rise clusters to dense downtown blocks.
- **Terrain** — five elevation bands to 100 m and above; water constrains routing and building.
- **World objects** — rocks, trees and ponds physically block factory placement.
- **Era** — the calendar runs from 1950 onward, with steam locomotives and period road vehicles.
- **Narrative scope** — no campaign or dialogue. The only characters are the 16 illustrated staff archetypes.

ART DIRECTION & VISUAL IDENTITY

PRODUCTION APPROACH

A **licensed low-poly 3D art base** (Synty Studios / Unity Asset Store) combined with a **custom-built pixel-art interface**. Engineering effort goes into systems depth while a coherent commercial art library carries the world.

THE SIGNATURE IS THE UI

Dark ornamental frames, bitmap type, crimson construction buttons, green industry buttons, hand-painted pixel icons. Consistent across every screen and the most ownable element of the presentation.

UI LAYER Pixel panel over low-poly world

INFORMATION DESIGN Overlays with legends

SCREENSHOT SHOWCASE

CONSTRUCTION + FLEET Rail construction and depot management open together over a dense junction

INDUSTRY The 16-factory catalogue

STAFF 16 professions, salary tiers

TARGET AUDIENCE

PRIMARY

Players of transport, logistics and industrial management simulations who want long single-player sessions and explicit control over supply chains — the audience that grew up with **Transport Tycoon** and **Industry Giant**.

SECONDARY

City-builder and tycoon players who prefer optimisation over combat; automation and resource-management players; players who value procedural replayability over authored scenarios.

POSITIONING

Competes on **depth of the player-authored supply chain**, not on graphical spectacle. English interface only — localisation is one of the areas where publisher support is sought.

AUDIENCE SIGNAL FROM THE LIVE STEAM PAGE The tags already on the store page cluster around exactly this audience.

MARKET POSITIONING

POSITIONING STATEMENT

Cargo Industry sits between its two stated inspirations: it takes the network-and-vehicle layer of a transport tycoon and hands the player the industrial map those games normally generate automatically, then adds a staffing constraint and terrain-limited siting on top.

Cargo-only and single-player by design — a focused product rather than a broad simulation.

COMPARABLE TITLES — MARKET DATA [TO BE ADDED]

Benchmarks for directly comparable current-market titles are to be compiled with the publishing partner, whose market data will be more reliable than public estimates.

SUGGESTED BENCHMARKS — NOT VERIFIED COMPARABLES

OPENTTD	TRANSPORT FEVER 2	RAILWAY EMPIRE
MASHINKY	RISE OF INDUSTRY	VOXEL TYCOON

Offered as research starting points, not as claims about audience overlap or commercial performance.

DEVELOPMENT STATUS

CURRENT STATE

Fully playable and functionally complete. A playable build is available on request.

ENGINE Unity • **TEAM** Solo

PLATFORM Windows 10/11, 64-bit

IMPLEMENTED AND VERIFIED

- Procedural world generation, 256 × 256
- Rail construction with diagonals and junctions
- Road construction, stations and vehicles
- 16 facility types, terrain-constrained
- 16-resource production chain
- Staff management, 16 professions
- Fleet: 3 locomotives, 32 vehicle types
- Routes and per-vehicle control
- Automatic rerouting after rebuild
- Four map overlays, statistical tables

Open design question — objectives and win conditions are not yet finalised. The game is built around open-ended optimisation, an area where publisher input would be valuable.

TEAM & PRODUCTION APPROACH

MARTIN TIMOTHY TIMKO

SOLO DEVELOPER • INDICATRIX STUDIO

Cargo Industry is designed, programmed and produced by a single developer in Unity.

Indicatrix Studio is the developer's own trading name, used for self-publishing. No third-party publisher is attached and all rights are available.

Location **[TO BE ADDED]** • Development history on the next slide

WHAT A SOLO PRODUCTION MEANS FOR A PARTNER

- **A complete, shippable product already exists.** No development risk from zero, no milestone funding needed to reach a playable state.
- **Decision-making is direct** — requests go straight to the person who wrote the code.
- **Ongoing capacity is retained** before and after launch.
- **The gaps are the publisher's strengths** — marketing, QA, localisation, PR, store strategy, launch.

DEVELOPMENT HISTORY

TIMELINE

JUL 2024 Project begins as a part-time hobby project

17 MAR 2025 Initial architecture created

TO 17 JAN 2026 Roughly 40% of development completed **without AI assistance** — core architecture, tile system and terrain rendering

FROM JAN 2026 AI adopted as a programming assistant

APR - JUN 2026 Most intensive development period

AUG 2026 Game completed

CODEBASE

86 source files in total, of which roughly **20** are main source files.

HOW AI WAS USED

The foundational systems — architecture, tile system and terrain rendering, about **40% of the work** — were written without AI.

From January 2026, ChatGPT and Claude (Sonnet / Opus) were used as **programming assistants** for code generation, modification and debugging, across roughly **50 prompts** in total.

AI-assisted code is disclosed on the Steam store page per Valve's requirements. All design, systems and UI decisions are the developer's own.

BUSINESS MODEL & ROADMAP

BUSINESS MODEL

Positioned as a **premium single-player PC title on Steam**. Release model, price and post-launch plan are open, to be defined with a partner.

Now: feature-complete build, Steam page live, internal balancing.

RELEASE MODEL [TO BE ADDED]

PRICE POINT [TO BE ADDED]

OTHER STOREFRONTS [TO BE ADDED]

POST-LAUNCH CONTENT [TO BE ADDED]

NEXT — WITH A PUBLISHING PARTNER

1. **Final production & QA** — external testing, balancing
2. **Design consultation** — the win-condition question
3. **Store optimisation** — capsule art, trailer, wishlists
4. **Localisation** — game and store materials
5. **Marketing & PR** — positioning, media, creators
6. **Launch** — release and post-launch support

TARGET RELEASE WINDOW [TO BE ADDED]

SIGNING TO LAUNCH [TO BE ADDED]

THE ASK

Cargo Industry is looking for a publishing partner to bring a finished game to market. The ask is not development funding from zero — it is commercial partnership on final preparation, launch, and everything after it.

PUBLISHING & DISTRIBUTION Releasing on relevant PC platforms

MARKETING & PROMOTION Positioning, campaigns, trailers, social, PR

STEAM & STORE PRESENCE Page optimisation, visibility, wishlists

QA & FINAL PRODUCTION Testing, bugs, balancing, release prep

LOCALISATION Game and store materials for international markets

PR & MEDIA OUTREACH Media, influencers, content creators

BUSINESS EXPERTISE Pricing, release strategy, target markets

LAUNCH MANAGEMENT Support before, during and after release

RIGHTS STATUS

Self-published under the developer's own label. **No commitments exist with any third party.** All rights are available for negotiation.

PARTNERSHIP STRUCTURE

A long-term partnership: the publisher contributes industry expertise, marketing and distribution; the developer retains the ability to keep developing the game. Revenue-share, funding and terms are open to discussion.

Cargo Industry is a finished transport and industry strategy game where the player draws the rails, chooses where industry can stand, hires the people who run it, and earns every credit by moving the goods. **A new world every time.**

It is built. It needs a partner to put it in front of the people who have been waiting for it.
